Art Unit: 2876

1. The preliminary amendment filed 11/16/04 has been entered. Claims 1-20 have been cancelled and claims 21-40 have been newly added.

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 21-40 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6,688,523. Although the conflicting claims are not identical, they are not patentably distinct from each other because all the currently claimed limitations can be found in the patent claims, only reworded. The patent claims an area array of photo sensor elements (cl 14 lines 2-3) disposed within a reader unit (cl 14 line 3), a means for focusing (cl 14 lines 3-4). There is claimed a means for projecting marker beams projected about the periphery of a field of view to delineate an area in the field of view for aiming the reader to image a discernable indicia (cl 14 lines 8-16). There is disclosed a plurality of marker spots (cl 16). The 6,688,523 patent does not specifically claim the housing, the optics component or the control means. However, providing a housing for a hand held code reader is old and well known in the art. It would have

Art Unit: 2876

been obvious to a person of ordinary skill in the art to provide a housing for the code reader as claimed in the 6,688,523 patent in order to protect the imaging components and circuit components against the elements and accidental damage. If not inherent, optical components for focusing in a code reader are old and well known. It would have been obvious to a person of ordinary skill in the art at the time of the invention to provide optical components in order to focus the outgoing light from the light sources onto a target plane and to focus the returning or incoming light onto a light detector in order to properly illuminate, mark and image an object code. Also, if not inherent, a control means within an electronic device is old and well known. It would have been obvious to a person of ordinary skill in the art at the time of the invention to provide a control means to the code reader claimed in the 6,688,523 patent in order to properly image, store and process any data contained in the object code.
